

## Groundhog: GDS Viewer

Curtis Lindstrom, Tim Manwill, Adam Montero, R. Scott Morley, Josh Sumner

Groundhog GDS Viewer takes a GDS file as input and gives you various options to view them. View specific layers with your choice of color, transparency, and name. Save a preference file of colors, transparencies, and names that you can use for any piece of GDS. Look at the layout of the structures as a tree to get a better idea of what you are looking at.
